### Chapter 1

**The Concept of a Human as an Integral Individuality** ............................................. 1
Abstract ....................................................................................................................... 1
Introduction ..................................................................................................................... 2
1.1. Basic Concepts of the Origin of Psychosomatic Disorders as Systemic Disorders ......................................................... 2
    1.1.1. Concepts of Linear Etiological Models ........................................ 4
    1.1.2. Concepts of "Behavioral Medicine" ........................................... 10
    1.1.3. Concepts of Integrative Models .............................................. 11
    1.1.4. Modern Ideas in the Development of Psychosomatic Medicine ................................................................. 12
1.2. Biopsychodynamic Approach as a Basis for Understanding of an Integral Human Individuality .............................................. 13
    1.2.1. The Essence of the Biopsychodynamic Approach to Assess a Human Individuality ................................................. 13
    1.2.2. Concepts of a Human Individuality as a Whole ..................... 13
    1.2.3. The Concept of the Hierarchical Levels of an Integral Individuality ........................................................................... 14
    1.2.4. Concepts of the Bodily Basis of Temperament ...................... 17
    1.2.5. Brain Activation Concept ....................................................... 19
1.3. Conclusion. Our Own Hypothesis ................................................................. 20
References ................................................................................................................ 23

### Chapter 2

**Methodology and Methods of Integral Human Research** ........................................ 27
Abstract .................................................................................................................... 27
Introduction ................................................................................................................. 28
2.1. Psychological Level of Research ........................................................................ 28
    2.1.1. Temperament Traits Accentuation Test (TTAT) ...................... 28
    2.1.2. Test for Differentiated Assessment of Personal Anxiety .......... 54
    2.1.3. Definition of Reactive Anxiety ............................................... 63
    2.1.4. Test for Differentiated Assessment of Mental Rigidity (TDAMR) ................................................................. 63
Chapter 3

Individual Adaptive Self-Regulation Styles of Energetic and Informative Human Interaction with the Environment

Abstract

Introduction

3.1. Temperament and Global Character Traits as the Integral Individuality Parameters in Emotionally Neutral and Stressful Situations

3.1.1. Psychological Interpretation of the TTAT Scales

3.1.2. Neurophysiological Indicators of the Brain Activation in Different Accentuated Temperament Types in an Emotionally Neutral Situation and in Psychoemotional Stress
3.1.3. Features of the Autonomic Nervous System Activation in Persons with Different Accentuated Temperament Types in an Emotionally Neutral Situation and in Psychoemotional Stress ................................................................. 115
3.1.4. Psychoneuroendocrine Integral Indicators in Humans in an Emotionally Neutral State and in Psychoemotional Stress ........................................................................................................ 122
3.1.5. Neuropsychological Level .................................................................................. 124
3.1.6. Reactions to a Psychoemotional Stress in Humans with Different Types of Psychoneuroendocrine Profile ................................................................. 129
3.1.7. Interlevel Connections of Integral Characteristics in Subjects with Different Types of Psychoneuroendocrine Profiles in a State of Psychoemotional Stress ........................................ 133
3.1.8. Formal-Dynamic Characteristics of the Psychomotor Human Activity in Different Accentuated Temperament Types ...................................................................................... 138
3.1.9. Formal Dynamic Characteristics of Psychomotor Activity in Persons with Different Types of Temperament ................................................................. 140

3.2. Integral Parameters of Human Informative Interaction with the Environment
3.2.1. Self-Regulation of Functional Systems Based on Various Types of Feedback ................................................................................................................................. 144
3.2.2. Attention as an Integral Phenomenon of the Mental Self-Regulation ................................................................. 160
3.2.3. Cognitive Style "Concrete/Abstract Conceptualization as an Integrative Parameter of an Individuality ................................................................. 166

Conclusion .................................................................................................................. 180
References...................................................................................................................... 181

Chapter 4 Energetic and Informative Interaction with the Environment, Individual Specific Styles of Adaptive Self-Regulation of the Interaction and Their Role in the Genesis of Different Psychosomatic Diseases ................................................................................................................................. 187
Abstract ..................................................................................................................... 187
Introduction ................................................................................................................. 188
4.1. Features of Adaptive Self-Regulation in Individuals with Behavioral Risk Factor for Coronary Heart Disease (Type a Behavior) and in Patients with Such Pathology ................................................................. 188
4.1.1. Biopsychodynamic Aspects of Personality in Type A Behavior (TAB) ................................................................................................................................. 189
4.1.2. Features of the TAB Individual Self-Regulation in the Situations of Psychoemotional Stress ........................................................................................................ 210
4.2. Biopsychodynamic Characteristics of Persons Prone to the Hypertensive Reactions, and Patients with Arterial Hypertension ................................................................................................................................. 219
4.2.1. Individually-Specific Styles of Self-Regulation in Individuals Who Had the Patients with Essential Hypertension in the Family History, and Their Own Predisposition to Hypertensive Reactions ................................................................................................................................. 220

## Contents

4.7.4. Individual Manifestations of Hormonal Activity in Pregnant Women with Different Types of Temperament .......... 264
4.7.5. Individual Characteristics of the Labor Pain in Childbirth in the Studied Women with Different Types of Temperament .......... 267
4.7.6. Conclusion ................................................................................ 269

4.8. The State of Adaptive Self-Regulation in Women with Recurrent Miscarriage .................................................. 269
   4.8.1. Assessment of Mental Status ..................................................... 271
   4.8.2. CNS Activation Level ................................................................ 272
   4.8.3. Treatment .................................................................................. 272
   4.8.4. Conclusion ................................................................................ 274

4.9. Biopsychodynamic Approach to Evaluating the Effectiveness of the "School of Health and Development" Program ....................... 274
   4.9.1. Psychological Level of Research .............................................. 275
   4.9.2. Activation of the Autonomic Nervous System ....................... 278
   4.9.3. The CNS Activity Was Determined at the Behavioral and Electro cortical Level of Its Manifestations ............................ 279
   4.9.4. Anthropometric Research ......................................................... 280
   4.9.5. Conclusion ................................................................................ 280
   4.9.6. Conclusion ................................................................................ 281

References .................................................................................................. 281

Chapter 5 The Value of Biopsychodynamic Characteristics for Individualization of Therapy in Psychosomatic Disorders ............. 289
   Abstract ................................................................................................. 289
   Introduction ............................................................................................... 290

5.1. Biopsychodynamic Relationships in Persons with Hypertensive Disease in the Context of Therapy Individualization .............................................. 290
   5.1.1. Features of Biopsychodynamic Characteristics ....................... 291
   5.1.2. Therapy Results ........................................................................ 291

5.2. Biopsychodynamic Relationships in Patients with Discirculatory Encephalopathy in the Context of Phezam Therapy Individualization ..... 293
   5.2.1. Biopsychodynamic Study ............................................................ 293

5.3. Psychophysiological Effects of Transcranial Electrical Brain Stimulation ....................................................................................... 294
   5.3.1. Effects of the Transcranial Electrical Brain Stimulation on the Biopsychodynamic Parameters Of an Individuality .......... 296
   5.3.2. Effects of the Transcranial Electrical Brain Stimulation on the Self-Regulation in Persons with a Behavioral Risk Factor for Coronary Artery Disease .............................................. 302
   5.3.3. Conclusion ................................................................................ 304

References .................................................................................................. 304

Conclusion Justification of the Concept, the Main Provisions .................. 310
References ................................................................................................. 313
Appendix ...................................................................................................... 333
